

# Automatic box Packaging Equipment

## Outline:

The design of the Saga Nisshiki package is of very high quality, and the paper used for the packaging is excellent. Furthermore, in consideration of environmental issues, they have opted not to use glue or tape for packing. Until now, the box packaging and folding of the Saganishiki package have been done solely by hand, posing a significant challenge for mechanization. After discussing the mechanization of this manual work with them, we embarked on creating an automatic box packaging machine. Over a period of six months, we conducted tests, made adjustments, and carried out investigations repeatedly. Finally, we completed a machine capable of handling the box stuffing process, which had previously been done by hand. This machine can fold, assemble boxes, and print manufacturing dates. It has received high acclaim and a reputation from customers as being "the only machine of its kind in the world".

## Specification:

<b>Name</b>	Box Packaging equipment
<b>Parts and Machineries</b>	4 servo motors Mount adsorption pad, 0.75kw for bucket conveyor, etc. Cam link, 3-phase AC200V
<b>Capacity</b>	Max 25 box / min
<b>Body Dimensions</b>	Height 2000 (mm), Length 6000 (mm), width 2300 (mm)

Sales Agents:

*Aiming for Harmony between People and Work*
