

Automatic box Packaging Equipment

Outline:

The design of the package of Saga Nisshiki is very high and paper quality of the pack is very good. Moreover, concerning environmental issue, they do not want to use glue or tape for packing. So far, difficult to machine, box packing and folding of the package of Saganishiki has been done only by hand. We worked on making automatic box packaging machine after discussing with them “mechanization of this manual work.” Over six months, a test, adjustment, and investigation were repeated and the machine which can do box stuffing work which inserted in by hand was completed. It can fold, making box and printing the manufacturing date through this machine. It receives high acclaimed high reputation from the customer that “this is only machine in the world”.

Specification:

Name	Box Packaging equipment
Parts and Machineries	Servo Motor Bucket Conveyor Cam Link AC200V
Capacity	Max 25 box / min
Body Dimensions	Height 2000 (mm), Length 6000 (mm), width 2300 (mm)

Manufacturer

DAISHIN Co., Ltd.
